EXAMINER'S AMENDMENT

The declaration filed on 23 March 2005 under 37 CFR 1.131 is sufficient to overcome the Lu reference.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with *Myron Amer* on 10 June 2005.

The application has been amended as follows:

Claim 1, line 3, --flaccid-- has been inserted between "a" and "string".

Claim 1, line 17, --when-- has been inserted between "whereby" and "worn".

Claim 1, line 17, --when worn-- has been inserted between "and" and "as".

Claim 1, line 17 and 18, --solely-- has been inserted after "beads".

The following is an examiner's statement of reasons for allowance: Hart discloses a linear jewelry article of a selected length and worn by encircling a user's neck or a limb. The article comprises a flaccid string and plural beads. The beads have

a central opening therethrough and have a first select number of non-magnetic construction material and a remaining second select number of magnetic construction material. The opposed ends of the article are interconnected. Different configurations are obtained by placing two magnetic beads next to each other. However, Hart fails to disclose that the beads are disposed in a uniform repetitive ratio to each other and that the beaded string is worn in helical turns that are maintained solely by the contact of the magnetic beads without have interconnection of the opposite ends of the article. Accordingly, it would not have been obvious to one having ordinary skill in the art at the time the invention was made to have a beaded string having a repetitive pattern throughout the string where the pattern is formed by magnetic beads and not magnetic beads in such a way that when worn around a user's neck or limb the string will not require an interconnection of the ends of the string because the magnetic beads will retain at least one end of the string with another magnetic bead that is not located at the other end of the string since the string is being worn in a helical pattern around the user's neck or limb.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ishikawa (US 4,095,587), Beniya (US D 254,126), Park (US 5,137,507), Hayakawa (US 5,535,603), Fan (US 6,544,164 B1) and Lu (US 2004/0111005 A1) are cited to show state of the art with respect to articles of jewelry that have magnetic beads.
